

Opto Technica

SHARE FILES WITH CLOSE BUSINESS PARTNERS AND CUSTOMERS

WebFile allows your employees to share files as large as 200MB with business partners without the complexity of an FTP site and the size limitations of email.

SIMPLE, ALL YOU NEED IS A WEB BROWSER

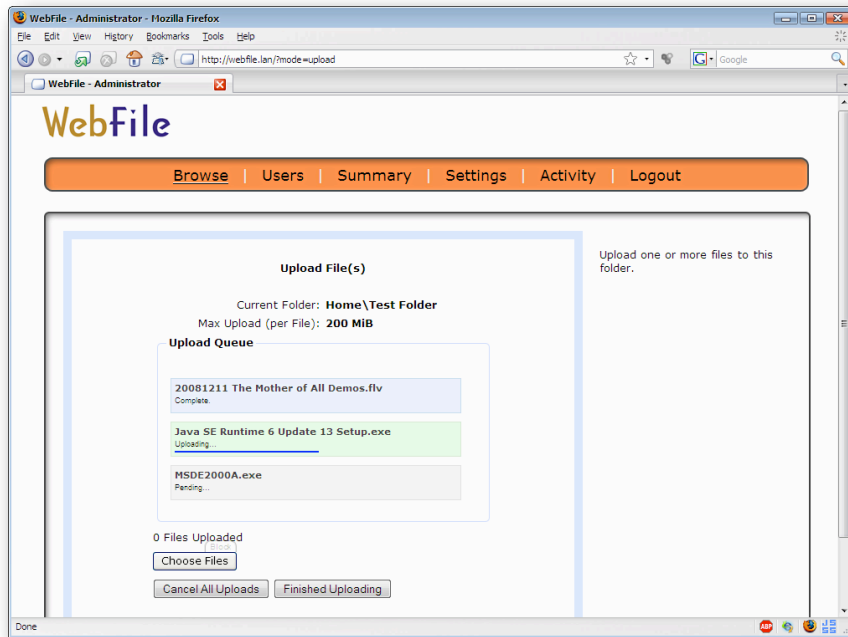

VPN's or other solutions such as Citrix can be complex and expensive to set up and are usually limited to employees. WebFile makes company file sharing easy, inexpensive and available to partners and customers.

DON'T LET MESSY EMAILS STALL PROJECT COLLABORATION

All files pertaining to a large project can be centrally stored on a dedicated folder on WebFile for better and easier collaboration among employees and partners. Employees no longer need to sort through hundreds of emails to find out which version of the latest proposal was sent to the customer.

WebFile

Secure File Sharing made easy

Opto Technica is a Value-Added Distributor whose **mission** is to partner with global vendors from the US, Europe and Japan to bring unique IT solutions to small and medium sized enterprises across the Asia Pacific region.

WebFile is another world-class solution brought to you by Opto Technica. Designed with a focus on operational simplicity and yet absolute security, WebFile allows small local businesses as well as large global companies to share files with partners, customers and among employees.

Email servers are commonly overloaded with too many attachments copied to too many recipients, forcing administrators to implement drastic file size limitations – WebFile allows you to share any number of very large files with your partners and among employees (up to 200MB per file), keeping the load away from your email server.

Companies with foreign operations no longer have to deploy expensive and complex VPN's or solutions such as Citrix. WebFile stores your data inside your office and allows authorized employees to access permissible files from any computer and through any web browser.

STORE ALL COMPANY FILES IN ONE SECURE LOCATION, INSIDE YOUR OFFICE

Store all important files in one location for easy management, sharing and protection. Folder management is simple and intuitive. WebFile runs on a server that resides in your office. Unlike other web serving products, WebFile guarantees that your data is safe at all times.

TRACK AND REVIEW

Track the activity of staff and customers to know when important files are uploaded, downloaded or changed. WebFile tracks all file activities and provides complete audit trail to the administrator.

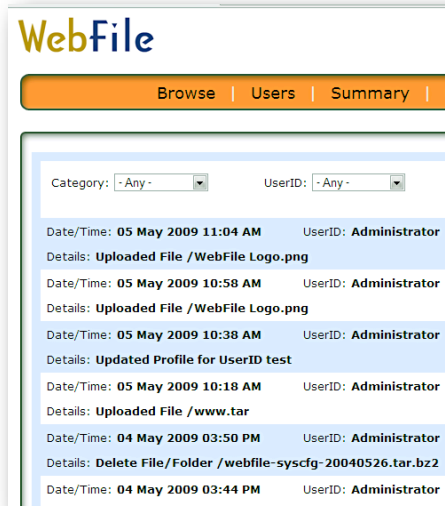

FREE EVALUATION

Contact Opto Technica for evaluation and trial.
